## HIS 300 - ANATOMY OF INTELLIGENCE FAILURE: THE YOM KIPPUR WAR, 1973

**WHEN:** Monday, June 5

**TIME:** 9am-Noon

**WHERE:** USCB Beaufort Campus, Sandstone 124

**COST:** OLLI members Free, Non-OLLI members \$10

**\*LIMITED ENROLLMENT – 24**

**\*Pre-reading requirements**

This seminar is an in-depth look at the context and run-up to the attack on Israel from Egypt and Syria that caught Tel Aviv completely by surprise in October 1973. The class dissects why Israel was so surprised...its existence hung in the balance for two days. The instructor developed this course while at the National War College as a way to introduce our military officers to the role of national intelligence and to introduce them to a small piece of how we train our intelligence analysts.

**INSTRUCTOR:** JOHN MCSHANE, served 30 year senior leadership career at CIA, including: Dean, Sherman Kent School for Intelligence Analysis; Director, Western Hemisphere/National Security Council; Director Analysis/Production, National Security Agency; National Intelligence Manager, Western Hemisphere; and CIA Chair, National Defense University.

## **ART 301 - THE ART OF NORMAN ROCKWELL**

**WHEN:** Monday, June 5

**TIME:** 10am-Noon

**WHERE:** 2 Mathews Ct., Hilton Head Island

**COST:** OLLI members Free, Non-OLLI members \$10

As the premiere illustrator for the *Saturday Evening Post* for nearly half a century, no other American artist was more popular with the public than Norman Rockwell. Americans saw in Rockwell's art a reflection of their values, their strengths and their foibles. Despite his easy-going, pipe-smoking facade, he was a lonely man who suffered from depression. This presentation explores the life and art of America's unofficial "Artist-in-Chief," and the unique and lasting contribution he made to American life.

**INSTRUCTOR:** RON ROTH is former director and CEO of the Reading Public Museum in Reading, Pennsylvania, and director of the Nebraska Museum of Art of the University of Nebraska. He has curated or co-curated numerous exhibitions from the *Patriotic Paintings of N.C. Wyeth* to a major exhibition with international glass artist Dale Chihuly.

## **REL 300 - ARE THERE HIDDEN SPECIAL JEWISH INFLUENCES IN THE ART OF THE SISTINE CHAPEL?**

**WHEN:** Wednesday, June 28

**TIME:** 1pm-3pm

**WHERE:** USCB Bluffton Campus, Hargray 156

**COST:** OLLI members Free, Non-OLLI members \$10

In the last decade, some Jewish scholars have been arguing that Michelangelo included "secret" Jewish elements and meanings in his art in the Sistine Chapel in the Vatican. These surprising elements are a matter of scholarly debate. We will examine and discuss a number of the artistic works in their context among the art of the Sistine Chapel and discuss the Jewish elements and meanings. Fred Reisz, instructor, hopes that there will be Jewish students in this class to supplement his theological and artistic knowledge. This subject area remains a controversial one in the artistic, theological and ecclesiastical worlds.

**INSTRUCTOR:** Dr. H. Frederick Reisz, Jr. has a Ph.D. in theology from The University of Chicago. As adjunct faculty, he has taught courses at Wittenberg University, Harvard Divinity School, and a semester as Visiting Professor at Yale Divinity School in 2008. He taught on the faculty and was President of the Lutheran Theological Southern Seminary in Columbia, SC for 14 years before retiring. In OLLI, he teaches courses on religion, ethics, Christianity and the fine arts, and the architecture and art of cathedrals and churches.

## **SCI 302 - MOLTEN SALT NUCLEAR REACTORS**

**WHEN:** Monday, July 17 & 24

**TIME:** 1pm-3pm

**WHERE:** USCB Bluffton Campus, Hargray 156

**COST:** OLLI members Free, Non-OLLI members \$10

Are we in the midst of a nuclear renaissance in power production, or has the Fukushima event and inexpensive natural gas made nuclear power irrelevant? While the reactor design used in almost all nuclear power plants has changed little in the past decades, there is a reactor design, the Molten Salt Reactor, that is said to be intrinsically safe (walk-away safe), to be proliferation resistant and not to produce radioactive waste that has to be safeguarded for tens of thousands of years. Some cost analyses show that reactors building on this design could produce electricity more cheaply than coal or natural gas, potentially using a fuel cycle that is almost inexhaustible. A simplified version of this reactor design has been demonstrated experimentally at the Oak Ridge National Laboratory in the 1960s. Now multiple companies around the globe are working to commercialize variants of this design. Is this too good to be true? This lecture will review the Oak Ridge experiments and subsequent concept designs, and will discuss several of the design variants that are in some stage of development, including their strengths and weaknesses.

**INSTRUCTOR:** BILL JORDAN has a Ph.D. in Nuclear Chemistry from the University of Pittsburgh. During his career at Bell Laboratories, he worked in various research areas. He has presented OLLI classes in several areas of science and technology.
